Visionflex Powers the Future of Telehealth with Vonage

By embedding the Vonage Video API directly into the Vision Telehealth Platform, as well as a comprehensive range of cutting-edge telehealth devices, medical equipment, and software solutions, Visionflex is enabling deeper, more meaningful virtual healthcare interactions and bringing medical expertise to remote patients in need.

Taking Telehealth to the Next Level

The Vonage platform implements security and data privacy best-practices, alongside best-in-class video quality that allows for engagement between healthcare providers and patients that rivals in-person interaction. Powered by Vonage APIs, Visionflex is building the future of telehealth by offering connected diagnostic imaging, stethoscope functions, pulse oximeter, ECG readings and more above and beyond a simple video conference appointment.

"We designed the Vision Telehealth Platform to be more than just a face-to-face video conference. To realize our goal of fully remote, connected clinical examinations we knew we needed audio and video that rose to the quality, reliability, and security demanded by the healthcare industry - that's why we chose Vonage."

- Alex Hollings
Business Development Manager
Visionflex

"Vonage was the best solution for us, because it offers the flexibility to integrate with Visionflex software and hardware, along with global reach and reliability - all while taking care of the complexity of building a video solution," explained Hollings. "From both an audio and video standpoint, Vonage provides the clarity and quality that healthcare professionals need to do their jobs and do them well."

Creating Meaningful Connections between Patients and Providers

The Visionflex team is focused on connecting medical experts and patients around the globe in regional, remote, rural, and urban areas by transforming any internet-connected device into a powerful medical examination and diagnostic tool. Backed by the Vonage Communications Platform, Visionflex is creating telehealth technology that changes lives.

"Our development team has been impressed with the top-notch documentation available from Vonage," notes Hollings. "We were given everything we needed to quickly and easily embed the APIs into our application - and throughout the process the Vonage team has provided any support we needed."

The need for high-quality telehealth solutions has skyrocketed since the onset of the COVID-19 pandemic, as patients and providers adapted and shifted to remote consultations and care. Moving forward, patients and providers alike will continue to expect seamless, convenient digital experiences. Vonage enables businesses like Visionflex to provide cutting-edge technology that is revolutionizing the way people think about healthcare around the world.

"At Visionflex, our goal is to expand remote healthcare beyond video conferencing and add value to telehealth consultations through the use of specialized medical devices and technology designed for this new way of providing care," explains Hollings. "With Vonage APIs embedded into our solutions, we are providing audio and video connections of the highest quality, which allows medical practitioners to become more than passive participants in telehealth - they can gather the data needed to diagnose and care for patients - anytime, anywhere."

Vonage, a global cloud communications leader, helps businesses accelerate digital transformation. Vonage's Communications Platform enables integration of APIs into existing products, workflows and systems. Vonage's fully programmable unified communications and contact center applications are built from the Vonage platform and empower companies to transform how they communicate and operate.
